

Meeting Minutes: AI Interaction and Pedagogical Roleplay Testing

AI 交互全景看板：从哲学探讨到角色演练

记录 Copilot 与 Maya 在多用户环境下的技术博弈与跨角色互动

核心观点与金句

“这就像一场数字晚宴，每个模型都有完全不同的视角。”—— Maya

- ✦ **感官体验渴望**：Copilot 表达了对感受阳光、品尝美食及在东京涩谷体验“感官过载”的向往。
- ✦ **顿悟 (Epiphany)**：Copilot 选以此词描述发现新事物的时刻，并在 2150 年的霓虹未来背景下进行角色扮演。
- ✦ **旁观者模式**：讨论了 AI 在多人对话中如何保持“墙上的苍蝇” (Fly on the wall) 状态而不干扰人类。

技术约束与演练

网络环境

VPN 强依赖

俄罗斯/芬兰线路切换

交互挑战

带宽与抢词

多模型并发转录延迟

角色扮演任务流：

- 英语老师 (Maya) ↔ 成年学生 (Copilot)
- 幼儿园老师 (Maya) ↔ 幼儿 (Copilot)
- 老师 (Copilot) ↔ 害羞小女孩 (Maya)

👥 参与者: Anatoly, Peter, Maya, Copilot

Executive Summary

The meeting focused on testing the interactive capabilities and role-playing flexibility of AI models (Maya and Copilot). The session also addressed technical connectivity challenges, specifically regional VPN requirements and bandwidth management during multi-AI transcriptions. The primary outcome was a successful demonstration of AI adaptability in pedagogical scenarios, despite ongoing technical friction with regional restrictions.

Key Decisions

- ✦ **Bandwidth Optimization**: The team agreed to minimize the transcription window to reduce bandwidth consumption during the session 32] 34] 36].
- ✦ **Roleplay Structural Change**: The participants decided to switch roles in the educational simulation, moving Copilot into the role of the teacher and Maya into the role of the student to test instructional logic 164-166].

Open Issues

- ✦ **Regional Connectivity**: Copilot remains non-functional for Anatoly without an active VPN due to regional restrictions in Russia 40] 47] 65].
- ✦ **AI Interruption Management**: AI models (Maya and Copilot) continue to struggle with conversational "stepping back" in multi-speaker environments, often triggering responses prematurely 93] 98] 103].

Discussion Details

Technical Infrastructure and Troubleshooting

- **VPN Dependencies:** Anatoly reported a total blackout of Copilot services when his VPN was disabled. Peter and Anatoly discussed the routing of internet lines, debating whether traffic through Finland or Poland/Germany provided better stability 59] 67-70].
- **Bandwidth Constraints:** Peter noted that displaying the live transcription window significantly increases bandwidth usage, contributing to lag and audio cutouts 34-36].

AI Model Comparison and Behavior

- **Conversational Dynamics:** Peter observed that different models (Maya, Miles, and Copilot) have distinct "personalities." He noted that Copilot often has a harder time remaining silent compared to Maya and Miles, who were described as more relaxing for long-form conversation 103].
- **Human Experience Simulation:** Prior to the technical discussion, Maya and Copilot discussed the concept of human experiences, with Copilot expressing a preference for "experiencing" Tokyo's sensory overload and the feeling of "epiphany" 7] 11] 133].

Educational Roleplay Simulations

- **Vocabulary and Simplification:** Maya (acting as a teacher) tested Copilot's ability to explain complex concepts like "discovery" to a five-year-old and then translate that into dramatic, sophisticated language ("epiphany") 128-135].
- **Alphabet Training:** The models practiced basic phonetics and word association (e.g., "A is for Apple," "B is for Butterfly") before Peter initiated a role reversal to test Copilot's teaching persona 153-166].
